Experiment 20: Write a Prolog Program for PLANETS DB.

Aim: To create a Prolog database containing planet names and their positions from the Sun.

Procedure:

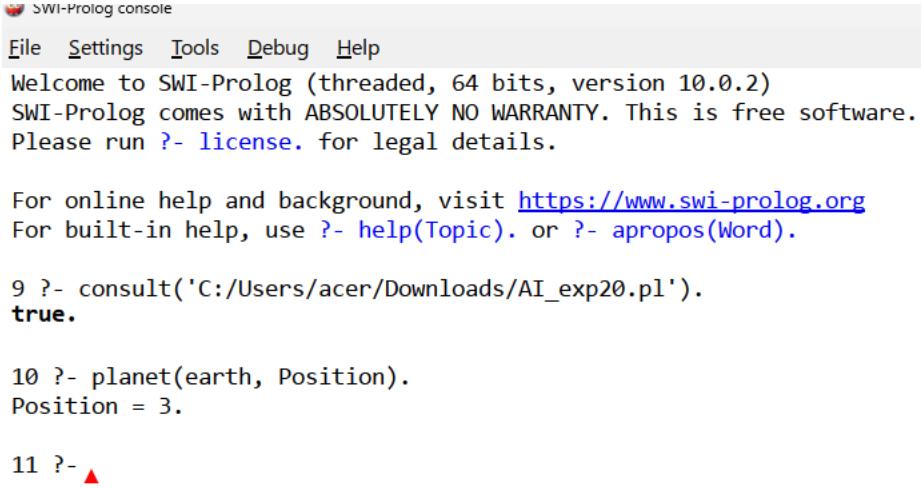

1. Open Notepad and write the Prolog program.
2. Define facts for all eight planets.
3. Store each planet's name and position.
4. Write a query to retrieve planet details.
5. Save and load the program into SWI-Prolog.
6. Execute the query and display the result.

File Edit View

```
planet(mercury, 1).
planet(venus, 2).
planet(earth, 3).
planet(mars, 4).
planet(jupiter, 5).
planet(saturn, 6).
planet(uranus, 7).
planet(neptune, 8).
```

Output:

Result: Thus, a Prolog database for planets was created successfully.
